Dear Ryan,

**Response to Network Rail Representations for DB Cargo (UK) Ltd's proposed 81<sup>st</sup> Supplemental Agreement**

Thank you for the opportunity to comment on Network Rail's representations.

It does not instil confidence of a successful and early resolution to read "*Network Rail has not yet had an opportunity to fully consider its position on this application and whether it can eventually support the proposed access rights.*"

It is appreciated that Network Rail has had to respond with its representations to 83 applications in a short period of time. However, some of the representations lack relevance to the content of the applications and appear to be a "stock response" subject to copy and paste.

DB Cargo would point out that in a paragraph under business continuity, where Network Rail states that "*there is a risk that rights might not be available in time for an operator to commence services as early as it would like.....*" the relevant services are operating and indeed have been doing so for months!

Freight operators have witnessed nearly a decade of contingent, time-limited rights for freight traffic over critical ECML infrastructure. The suggestion, proposed by Network Rail, that this approach continue would be very bad news for freight operators and the industry. The uncertainty and risks around timetabling and allocation of capacity will continue to influence investment decisions adversely.

The appendix includes some commentary at regional level. A paragraph in Appendix B (Eastern Region) relates to rolling stock and power modelling. This has no relevance to the proposed 81<sup>st</sup> SA as the access rights DB Cargo is seeking relate to diesel-hauled freight flows. In Appendix C (North West & Central) there is a lengthy paragraph concerning power supply, which has no relevance to this application. A further 2 paragraphs relate to empty (passenger) rolling stock and power supply and are without relevance.

2/2

Comments in Appendix F concerning the Cardiff and Oxford areas and timescales for evaluating optimisation of capacity are concerning.

Please don't hesitate to contact me should you have queries concerning the proposed 81<sup>st</sup> SA.

Yours sincerely,

***Quentin Hedderly***
